

Paypoint.

Turn any product or service into a professional checkout in seconds.

Commerce infrastructure for Africa's social sellers.

PRE-SEED • 2026 • CONFIDENTIAL

Founder: Yvonne • Lagos, Nigeria

Selling online is still too hard

Across Africa, a new generation of entrepreneurs build real businesses inside Instagram, TikTok, Facebook and WhatsApp — but the tools they use to get paid were built for **websites, not chats**.

- To sell today, a merchant stitches together a website, a payment setup, manual invoices, manual order tracking and manual payment confirmations.
- The result: **friction, lost trust, abandoned sales**, and a checkout that doesn't look professional.
- Small businesses are roughly **90% of all businesses in Africa**, yet most payment tools assume a website.

Source: World Bank / Mastercard (Sub-Saharan Africa ~44M MSMEs); Nigerian Communications Commission (40M+ Nigerians used social media for commerce in 2023).

WHY NOW

Social commerce is exploding. The payment layer hasn't caught up.

\$2.04B→\$3.96B

Nigeria social commerce,
2025→2030 (~24%/yr)

\$9.43B

Africa social commerce by 2030
(16.2% CAGR)

40%+

of internet users in NG/KE/ZA
already buy via social

60%+

of African e-commerce is mobile —
checkout must be mobile-first

The buying journey moved to social. The way sellers get paid did not move with it.

Meet Paypoint

Paypoint lets anyone create a professional checkout experience in **under 30 seconds**. No website. No code. No complicated setup.

Create

A product, service, event, class, consultation or digital product.

Generate

A checkout page, a shareable payment link and a receipt.

Share

Anywhere your customers already are — and get paid.

Money settles directly to the seller's bank account. **Paypoint never holds the seller's funds.**

From "send me your account number" to a checkout a stranger trusts

1

Create

Add what you sell, a price and a photo.

2

Share

One link — to a bio, a chat, a post or a QR code.

3

Pay

The buyer pays on a clean, branded, secure page.

4

Receipt

An instant receipt and record for buyer and seller.

A large, fast-growing flow of payments with no checkout layer

Paypoint's revenue scales with the payment volume it processes: **Revenue = GMV × take rate**. The market is sized the same way.

TAM

\$2.04B → \$3.96B

Nigeria social-commerce GMV (2025→2030)

SAM

Social-first sellers

GMV from sellers needing a hosted, trusted checkout

SOM

Active sellers × GMV × take rate

over the next 3 years

Continental upside: Africa social-commerce GMV on track for ~**\$9.43B by 2030**.

We earn when sellers get paid — and we're building to own the rail

Phase 1 · Today

Transaction fee — a small fee on every successful payment. Revenue from the first sale, no acquisition cost to start earning.

Pro subscription — a monthly plan for power sellers (custom domain, unlimited pages, branding, analytics, priority support). Predictable recurring revenue.

Phase 2 · CBN PSSP license

Paypoint secures its own **Payment Solution Service Provider** license and processes payments directly — capturing the full processing margin and removing dependence on third parties.

Still **never holds customer funds**; settlement goes to the seller's bank — lighter to regulate than a bank or wallet.

Future

Once the payment flow runs through Paypoint, layer **payouts and working-capital advances** — growing revenue per seller well beyond the transaction.

Built social-first, and built to own the stack

- **Social-commerce first** — designed for sellers in chats and feeds, not a website tool retrofitted for them.
- **Radical simplicity** — publish a checkout in 30 seconds, no code.
- **Trust by design** — brand, price, delivery, proof of past sales and an instant receipt on every page.
- **Own the infrastructure** — rail-independent today; vertically integrated tomorrow.
- **No custody risk** — we never custody funds, so we scale faster and face fewer hurdles than fund-holding fintechs.
- **Distribution built in** — every checkout is branded and turns buyers into the next sellers.

We don't replace the rails. We're the layer sellers actually use.

APPROACH	WHAT IT OFFERS
Paypoint	30-second setup, professional branded checkout, no website needed, built for micro & social sellers, share-native.
Payment gateways	Powerful, but built for businesses that can integrate and manage them.
Online store builders	Capable, but heavy and slow to set up for a single product or service.
Manual / bank transfer	Free, but untrusted, unstructured and unprofessional.

Paypoint is the simplest trusted checkout for the social seller — and is acquiring its own processing license to own the full experience.

Reach sellers where they already sell

- **Phase 1: Nigeria** — Instagram & WhatsApp sellers, coaches, consultants, event organisers and digital creators.
- **Viral loop** — every shared checkout is branded, so buyers discover Paypoint and become sellers. Near-zero acquisition cost.
- **Creator ambassadors** — partner with fashion, beauty, food and coaching creators who command seller audiences.
- **Community onboarding** — through trade groups, market associations and creator programs; seller-by-seller, then in cohorts.
- **Referral program** — reward sellers who bring sellers.
- **The wedge** — be the default checkout for one vertical, then expand outward.

Early signal, real momentum

[#]

Active sellers onboarded

~~N~~ []

Payment volume (GMV)

[#]

Payments completed

[%]

Month-over-month growth

Proof points: a standout seller quote, a weekly-volume chart, or a logo wall of early adopters.

Note: replace every figure with live numbers before sending. If pre-launch, reframe as waitlist / pilot sellers / letters of intent.

The model: GMV × take rate, plus Pro subscriptions

YEAR	ACTIVE SELLERS	GMV	REVENUE
Year 1	1,000	~N6.0B (~\$4.3M)	~N72M (~\$51K)
Year 2	10,000	~N60B (~\$43M)	~N720M (~\$514K)
Year 3	50,000	~N300B (~\$214M)	~N3.6B (~\$2.57M)

Assumptions (directional): avg order ~~N25,000~~; ~20 transactions/active seller/month (~~N500k~~ GMV); 1.0% take rate; 10% of actives on Pro at ~~N10,000~~/mo. After the PSSP license, processing margin is captured directly, lifting contribution margin further.

Source: Author's model. FX ~~N1,400~~/USD (June 2026, fluctuates). Adjust take rate and pricing once finalised.

From checkout to the seller's financial home

Now · 0–6 mo

Checkout MVP. Payment pages, shareable links, receipts, payments dashboard. One vertical, Nigeria.

Next · 6–12 mo

The seller storefront. Multi-product pages, custom link & domain, QR, trust signals, a second payment route for resilience.

Then · 12–24 mo

Recurring & intelligence. Subscriptions, invoicing, light CRM, analytics, Pro scaling. Secure the CBN PSSP license.

Vision · 24 mo+

The seller's money OS. Own processing at scale, multi-currency, new African markets, payouts & working-capital advances.

Trust is the product; community is how it spreads

Product vision

Every African who can sell something should get paid like a professional business: in under a minute, no website, no code, no technical skill — on a checkout a stranger trusts instantly. Paypoint grows from the page that collects the money into the operating system that runs the seller's commerce: their storefront, records, customers, and eventually access to capital.

Community vision

Paypoint grows like a movement of sellers who teach each other, not like ordinary software. Every checkout recruits the next seller. Seller circles, creator ambassadors and trade-group cohorts drive onboarding. Over time, "I sell on Paypoint" becomes a mark of a legitimate, trusted seller.

Raising \$350,000 Pre-Seed

Headline strategic use: **secure our own CBN payment processing license (PSSP)** and own our infrastructure.

- **Regulatory & licensing** — ~~~¥~~\$100M (~\$70K) minimum regulatory capital held by the company, plus ~~~¥~~\$1.1M (~\$800) CBN fees, plus legal & compliance.
- **Product & engineering** — ship the full platform, payments reliability and the Pro tier.
- **Go-to-market** — seller acquisition, creator partnerships and the viral loop.
- **Team & operations** — first key hires, compliance, support and buffer.

Runway 18–24 months. Note: the ~~¥~~\$100M PSSP requirement is regulatory capital the company must HOLD (historically deposited with the CBN, returned with interest after approval), not a spent fee. One 2025 advisory cites ~~¥~~\$250M — confirm the current figure with a fintech lawyer.

Paypoint.

Every seller deserves a checkout strangers instantly trust.

We're building the commerce infrastructure layer for Africa's social sellers — and we're building to own it.
